

The new and innovative preservative euxyl® K 830

Products

Dear Customer,

We are proud to announce the launch of our new personal care cosmetic preservative euxyl® K 830.

schülke has developed a new, highly effective cosmetic preservative blend by optimizing a harmonized triple combination of proven and new innovative ingredients. The euxyl® K 830 is a liquid cosmetic preservative composed of Phenoxyethanol and OCX- Efficacy Enhancing System. The OCX system consists of Ethylhexylglycerin and Octenidine HCL. Very low levels of Octenidine HCL already act as an excellent enhancer in combination with Ethylhexylglycerin.

This unique blend of mild preservatives is suitable for leave-on, rinse-off, wet wipes and sensitive applications (all formulations without anionics) and offers a fast action against moulds. In addition euxyl® K 830 is a clear, nearly colourless liquid which can be used for personal care applications with pH up to 12 and temperatures till 120°C. The recommended use concentration for the euxyl® K 830 is 0.5 -1.0% and the solubility in water is approximately 1.0%. In general the euxyl® K 830 displays good compatibility with most cosmetic ingredients and induces no discolouration when used in common cosmetic formulations.

We are very proud to share with you that schülke received the 2nd price of the Sepawa Innovation Award in Berlin for this new product.

If you are interested in this new preservative blend and would like to acquire more information, please contact us.

Kind regards,

The Matis Specialties-team
